

Homework 1 - Beginning HTML

Due January 27, 10am

Our first assignment is a simple and gentle introduction to HTML. After our brief discussion in class, you should have a general idea about what HTML is and Markup languages are. Begin by creating a new bin on [JSBin](#). You will see that, by default, JSBin gives you a basic HTML template to work with. Study each of the tags you see there and make sure you understand what they do. There are millions of resources on the web for you if you have questions or are having difficulty understanding. (You might try [this simple guide](#) for starters.)

Once you have done that, I would like for you to create a simple resume for yourself in HTML. The resume should include the following information in the following tags:

1. Your name, address, email address - these should use h1 and h2 tags. This information should be at the top of the page. Your email address should be a clickable link using an anchor tag.

Hint: For the clickable email tag, look into "mailto:".

```
<a href="mailto:"></a>
```

2. An unordered list which tells me the schools you attended and any jobs you have had (this doesn't need to be exhaustive, just give me the highlights).

Hint:

```
<ul>
  <li></li>
</ul>
```

3. A paragraph which describes your career objectives and which employs the following tags for styling: p, strong, em.
4. An image (from a publicly-available URL) that either shows your face or demonstrates your career aspirations in some way.

Hint:

```

```

Once you have done this, please email me the link to your bin so that I can check it and give you a grade.
