

Homework 2 - Submitting Forms

Due February 1, 10am

For this homework, I am going to ask you to build form and submit it to a remote server for processing. So create a form with the following attributes:

- A select with the label “Title”, the name “title”, and three options “Mr.”, “Ms.” and “Dr.”
- A text input with the label “Last Name” and the name “last_name”
- A textarea element with 5 rows, the label “Sample Text”, and the name “sample_text”. Inside the textarea, this text should be displayed:

`We the people, in order to form a more perfect union`

Your form should look something like this:

The form consists of three main input elements and a submit button. The first element is a dropdown menu labeled "Title" with a small downward arrow, currently showing "Mr.". The second element is a text input field labeled "Last Name". The third element is a text area labeled "Sample Text" containing the text "We the people, in order to form a more perfect union" with a cursor at the end. Below these fields is a horizontal line, and at the bottom is a button labeled "Go".

Figure 1: Form

Your form should submit a POST request to <https://loyolalawtech.org/class-exercises/homework2.php>

You should submit your form to the server using **your own title and last name** along with the sample text above. If you have submitted the form correctly, the server should respond to you with a greeting and a **cryptographic hash** of your data. The hash is a long string of numbers and letters. Please email me the hash (this is how I will tell you have submitted the data properly) along with a JSBin of your HTML.
